Hi Jeff, can you remind the exact address to show up at for access/clearance? This Monday afternoon, I'll be there ~2pm along with Greg Nagle from our EPA lab.

Thanks,
Juliet Hannafin

Juliet:

We should be able accommodate your request with little inconvenience other than we'd rather not move to a station on the north side of the conveyor when we are on the south side though or vice versa. I'm understanding your folks won't be there every day...based on that it would probably be helpful for us to know the locations you have particular interest.

Thanks, Jeff

Hi Jeff,

Nice... it does look at this point like it probably won't be very stormy on Monday.

I've got three EPA staff available who are experienced with Vibracore sampling, who I want to be out by the wharf to oversee the sampling. (Different people for different days).

I'm hoping that it won't be a problem for you to have the flexibility to sample particular stations of our interest on the days that we can make it there to observe (i.e. different stations at different times than your tentative schedule says), taking the tide into account of course.

Would that be a problem?

Thanks,
Juliet

Subject: Sims on Monday

Hi Juliet:

In response to your voice mail message, we don't plan to adjust our schedule based on forecast of rain for Monday.

But if it gets windy, at some level that would cause some issues working around structures and transiting under the wharf. I think we should be OK based on the prediction I just looked at for Monday

Regards, Jeff
